Murayama, S., Ueshita, K., and Saito, M.
THE BALL-DROP TEST AS A RAPID METHOD OF
MEASURING THE CBR. [1961] [12]p. 1 ref.
Order from SLA \$1.60

61-20099

Summary trans. of [Doboku Gakkaishi] (Japan) 1959,
v. 44, no. 1, p. 9-13.

DESCRIPTORS: *Pavements, *Soils, Test methods,
Density, Trafficability, Load distribution, Founda-
tions (Structures).

The CBR-value of a subgrade can be determined im-
mediately by measuring the diameter of the depression
produced on the surface of a subgrade by dropping a
spherical ball from a certain height. The testing
method is related to ordinary CBR-tests by theoret-
ical and experimental studies. This method can also
be used to measure the dry density and the traffica-
bility of a soil. (Author)
